Education

- | | | |
|-----------|--|-----------------------|
| MS | Università degli Studi di Napoli Federico II , Computer Science | Sept 2025 – Current |
| | <ul style="list-style-type: none"> • Scholarships : Awarded ADISURC Scholarships which is given to promising students in CS Dept | |
| BS | Università degli Studi di Napoli Federico II , Computer Science | Sept 2022 – Sept 2025 |
| | <ul style="list-style-type: none"> • Grade : 110/110 , GPA 4.0 • Scholarships : Awarded ADISURC Scholarships which is given to promising students in CS Dept | |

Experience

- | | |
|---|--|
| Università degli Studi di Napoli Federico II , Software Engineer Intern | Naples, Italy
May 2025 – Jul 2025
Github 🔗 |
| <ul style="list-style-type: none"> • Internship at PRISMA Lab on VR-based robotic arm control and data recording. • Implemented ROS2 nodes to stream VR headset/controller data to NVIDIA Isaac Sim. • Integrated inverse kinematics for KUKA LBR iiwa and developed trajectory recording tools. • Technologies: Python, C++, ROS 2, Isaac Sim, OpenVR, SteamVR, ALVR. | |

Projects

- | | |
|--|---|
| RacingDNA - Formula 1 Driving Style Analysis with VAE & Clustering | Dec 2025 – Feb 2026
Github 🔗
Hugging Face 🔗 |
| <ul style="list-style-type: none"> • Engineered an end-to-end ML pipeline ingesting and sanitizing 2024/2025 Race & Qualifying telemetry, implementing robust signal processing (G-force hysteresis, geofencing) to extract 1.1M+ cornering samples for behavioral modeling. • Architected a deep Variational Autoencoder (VAE), compressing high-dimensional telemetry (356D) into a latent space (32D) to enable efficient downstream clustering and visualization. • Operationalized unsupervised learning algorithms (K-Means) on latent embeddings to automatically categorize driving archetypes.. • Tech Stack: Python, PyTorch, NumPy, Pandas, Scikit-learn, Hugging Face Hub, Git. | |
| UninaEstates25 – Real Estate Management Platform (Immobiliare.it Clone) | Dec 2024 – Jul 2025
Github 🔗 |
| <ul style="list-style-type: none"> • Real estate service management project with a scalable micro-service architecture. • Developed a cross-platform Flutter frontend and modular backend with API Gateway and PostgreSQL. • Added secure communication, async messaging, and containerized deployment for scalability. • Technologies: Dart, Flutter, Java, PostgreSQL, RabbitMQ, JWT, Docker, Azure, Git | |
| MemeMuseum – Fullstack Meme Sharing & Voting App | May 2025 – Jun 2025
Github 🔗 |
| <ul style="list-style-type: none"> • Developed a fullstack web platform enabling users to upload memes, vote, comment, and tag content. • Integrated user authentication, profile pages, image storage, and search functionality; Dockerized setup for local development. | |

- **Technologies:** JavaScript, TypeScript, Angular, Node.js, PostgreSQL, Sequelize, Docker, JWT, Git, google bucket.

Algorithms and Data Structures Lab

- Built performant data structure libraries in C++, including: Hash Tables, Iterator, BST, Binary Tree, Stack, Queue, List, Vector. Emphasized clean architecture and unit-testability.
- **Technologies:** C++, CMake.

May 2024 – Jul 2024

[Github](#)

WirelessPhone - Multithreading and Multiprocessing Game

- Developed a high-performance client-server game in C using TCP sockets, multi-threading, and multiprocessing.
- Ensured process synchronization with POSIX primitives (signals, mutexes, condition variables); fully containerized for deployment.
- **Technologies:** C, POSIX, TCP Sockets, Docker, PostgreSQL, CMake, Git..

Jan 2025 – Feb 2025
